

IN THE SPECIFICATION

Please amend the third paragraph of the present invention as the following. The amendment is based on the Fig. 2 of the present invention. Thus no new matter is added.

The picture holder 1 further includes a loose-leaf binder device 20 engaged onto the upper panel 12 of the supporting device 10, and secured to the upper panel 12 of the supporting device 10 with fasteners 21. The loose-binder device 20 has a retaining strip 30 which has a hollow space 31 at a longitudinal direction; and at least one transversal slot 32. The loose-lead binder device 20 further includes one or more, such as two binder rings 23 provided thereon, the binder ring 23 passing through the transversal slot 32 so as to be fixed to the retaining strip 30. The binder rings serve for detachable or changeably attaching or securing pictures or posts or photos 3 thereon.
